**Subject:** Hyperion air permit application - supplemental information #2

Mr. Rombough,

As you know, separate from the air quality permit application, ERM has completed a screening level health risk assessment for the Hyperion Energy Center. A copy of the report documenting the results of this assessment was provided to DENR on April 23, 2008. Table 2-1 of the risk assessment report documents the emission factors and assumptions made in calculating emissions of organic Hazardous Air Pollutants (HAP), but does not provide emission estimates for speciated organic HAP compounds. Similarly, the air quality permit application includes estimates of total emissions of organic HAP, but does not provide emission estimates for speciated organic HAP compounds. In order to ensure that your records are complete regarding these emissions, I am attaching a table showing the organic HAP emission estimates that were calculated and used for the health risk assessment.

Thank you for your attention to this matter.

Colin Campbell
